

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

GEORGIA SECTION

C. F. von HERRMANN, Meteorologist

Vol. XXXIII ATLANTA, GA., OCTOBER, 1929

No. 10

GENERAL SUMMARY

October was a moderately cool month with a considerable excess in precipitation. The excessive rainfall, however, occurred entirely during the first few days of the month. A long period of dry, sunny weather followed, extending from the 7th to the 19th, and a second brief period from the 22d to the 27th. The important feature for the month was the movement of the subtropical storm from the southwestern corner of the State northward over central Georgia. This storm was accompanied by only moderately high winds, but remarkably heavy rains occurred, with consequent dangerous flood conditions over the eastern half of the State.

The flood in the Savannah River at Augusta was certainly the most impressive. There were, in fact, two dangerous floods, one only a few days after the other. On September 25 the stage of the river at Augusta was only 10 feet, but in two days or on September 27 it reached a crest of 46.3 feet or 7.5 feet higher than ever before recorded. Again as a result of the second period of heavy rains October 1 or 2, a second crest in the Savannah at Augusta was reached at midnight October 2 of 45.1 feet. The levee protecting Augusta served its purpose but owing to a break below the city some forty blocks in the low lying southern portions of the city were flooded. Railways, bridges and highways suffered so seriously that for several days there was no traffic into or out of Augusta. This was also true of other southern cities, as Waynesville, Millen, etc.

The Oconee, Ocmulgee, and Altamaha Rivers also experienced dangerous flood conditions, with crest stages as follows: Ocmulgee, Macon 25.1 ft. (2d) Hawkinsville, 30.6 (6th) Abbeville, 17.4 ft. (8th) and Lumber City, 20.0 (10th); Oconee, Millidgeville, 37.0 (2d), the highest ever recorded; Dublin, 27.6 (5th); Altamaha, crest stage reached at Everett City October 14th. The floods in the Flint, Chattahoochee, and Apalachicola Rivers were quite moderate.

Damage in southwestern Georgia was light and mostly due to high winds connected with the tropical storm. Many pecans were blown down from the trees. In other parts of the State the damage to railroads, bridges, highways, and crops was very great. Within a radius of 50 miles from Augusta the damage to crops was estimated at over a million dollars. The loss of live stock was very considerable. A conservative estimate of the total loss to agricultural interest, railroads, and highways in Georgia is three million dollars. There was remarkably little loss of life. The river and flood warnings issued by the Weather Bureau were unquestionably of immense benefit to the people.

TEMPERATURE

The monthly mean temperature from the records of 49 stations was 63.5° , or 1.1° below normal. The highest monthly mean temperature was 69.6° at Brunswick, and the lowest was 54.8° at Clayton. The highest temperature recorded was 90° at Millen on the 7th and 17th and at Quitman on the 8th. The lowest was 28° at Blue Ridge on the 26th.

PRECIPITATION

The average precipitation for the month, 63 stations reporting, was 5.24 inches, or 2.48 inches above the normal. The greatest amount was 11.97 at Double Branches and the least was 0.95 inch at Savannah. The average number of days with 0.01 inch or more of precipitation was 6. The greatest amount in any 24 hours was 9.82 inches on September 30–October 1 at Augusta.

MISCELLANEOUS PHENOMENA

The prevailing direction of the wind was northeast, with an average velocity of 7.4 miles per hour. The maximum velocity (for 5 minutes) was 40 miles per hour from the southeast at Savannah on the 1st.

The average number of clear days was 18, partly cloudy 6, and cloudy 7.

The percentage of possible sunshine (determined from the records of five Weather Bureau stations) was 68 (normal 62).

There were a few scattered thunderstorms on the 1st and 21st.

Light frosts was reported at points in the northern portion on the 16th and light to heavy frosts in the northern and central portions on the 23d and 24th and over much of the interior of the State on the 25th and 26th.
